DEFINITIONS

Basic Charge – A fixed charge for a portion of the costs of service that occur regardless of energy use. Includes the average cost for meter reading, billing, maintenance on electric lines and meters, administration, and repayment of long-term debt

KWH – Otherwise known as kilowatt-hour, this is what an electric meter measures. One KWH is equal to the energy needed to power a 100 watt light bulb for 10 hours.

Avoided Cost – “Avoided Cost” is the cost for wholesale electric power purchased by the Cooperative. Excess energy generated by Net-Metering Facilities can offset or displace a portion of these wholesale electric power purchases. Consequently, the value of excess energy from a facility is the calculated cost of equivalent wholesale electric power purchases that were offset or displaced (i.e., avoided).
